

Karthik K *Full Stack Web Developer*

✉ karthikkarunakaran444@gmail.com ☎ +91 8606643996 📍 Thrissur, Kerala [in LinkedIn](#) [GitHub](#)
[Portfolio](#)

Results-driven Full Stack Developer with 1 year of experience building scalable, production-ready web applications in a fast-growth product-based SaaS environment. Proficient in the MERN stack, TypeScript, PostgreSQL, and RESTful API development. Delivered end-to-end features supporting ~840% MRR growth and ~600% user growth. Experienced with Agile/Scrum workflows, Redux Toolkit state management, third-party API integrations, and performance optimization. Seeking to leverage deep full-stack expertise to build impactful, user-centric products.

Experience

Full stack developer , Kuvi Networks	03/2025 – 02/2026
• WelcomeScreen (Hospitality SaaS Platform) • Engineered full-stack features (React.js, Node.js, PostgreSQL) for Guidebook and Store modules, reducing guest support requests by streamlining self-serve information delivery. • Built a dynamic Guidebook system enabling hosts to manage and publish real-time guest information (check-in instructions, local recommendations); adopted by 100% of onboarded host accounts. • Delivered a full-scale multi-user Store module supporting seller and customer workflows, increasing transaction completion rate and overall platform usability. • Architected scalable state management with Redux Toolkit (Slice pattern), eliminating UI inconsistencies across complex async flows and reducing state-related bug reports. • Designed and maintained 20+ RESTful APIs using Node.js and Express with full CRUD operations, input validation, and error handling, ensuring reliable data flow across services. • Authored and managed database migrations (PostgreSQL) for each feature release, ensuring schema changes were versioned, reversible, and applied consistently across development and production environments. • Contributed to a high-growth environment achieving ~840% MRR growth and ~600% user growth during tenure. • Developed Roku TV app templates using BrightScript and XML, enabling the hospitality platform to deliver branded in-room guest experiences on smart TVs; configured and integrated backend APIs to power real-time content delivery on Roku devices.	

Education

Full Stack Development Course , Masai School	10/2024 – 03/2025 Bangalore
Bachelor of Computer Applications , Don Bosco College, Mannuthy	2020 – 2023 Thrissur Kerala

Skills

Frontend: JavaScript (ES6+), TypeScript, React.js, Redux Toolkit, Next.js (learning), HTML5, CSS3, SASS, Webpack, Formik
Backend: Node.js, Express.js, RESTful API Development, GraphQL (familiar), PostgreSQL, MongoDB, Mongoose, TypeORM (familiar)
Architecture: Microservices concepts, MVC, Agile/Scrum, Code Reviews, Logging & Performance Optimization, API Validation
Cloud & DevOps: Git, GitHub, Docker (familiar), CI/CD pipelines (GitHub Actions), AWS (S3/EC2 – familiar), Azure (familiar)
Tools: VS Code, Postman, Apify, Debugging, ESLint, npm

Projects

Skill Sphere , MERN Stack
Demo GitHub
• Architected a full-stack career development platform with end-to-end TypeScript integration, achieving zero runtime type errors in production and improving developer experience significantly. • Designed and implemented complex global state management using Redux Toolkit (Slice architecture) for user data, async API flows, and session handling across 10+ application modules. • Built secure JWT-based authentication and authorization with protected routes, role-based access control, and persistent session handling, supporting multi-role user workflows. • Deployed on cloud infrastructure with optimized API response times; the platform handles concurrent user sessions without performance degradation.
